

## SALLI IS THE BEST CHOICE BECAUSE

- 1 Only Salli has a two-parted seat that guarantees a healthy private area and a comfortable seating for men.
- 2 The still ongoing R&D started in 1990 has made it the most comfortable saddle chair in the market; it is also of high Finnish quality.
- 3 Salli has several models and a vast selection of accessories for different purposes and work environments, from schools to management level and to special work environments.
- 4 Salli's materials are durable: the trunk of the seat is of 3mm steel; the seat is of quality leather or very durable fabric or Finnish polyurethane for special purposes. The leather seat is made of five different materials.
- 5 Salli has a vast internationally operated research program of 24 different items (of which part has already been carried out), which helps in the product development and in popularising the saddle seating.
- 6 Salli exports its products to almost 30 countries and is constantly receiving valuable international feedback to support the research work.
- 7 The most important value in Salli Systems company is to satisfy the customer. Therefore we have the most knowledgeable customer and retail support in the market, which is needed as the application of the saddle seating and the exploitation of its benefits often requires special skills.
- 8 Salli is specialized solely in saddle chairs and the workstations supporting the saddle seating concept. Therefore it is understandable that the company is the quality leader in the field; it has know-how, skills and the best products. The object of Salli Systems is to change the prevailing seating concept.
- 9 Salli is an ethically high-class product, which has not been copied (unlike most of products). It is important for the company to operate both in the mental and the physical level according to the values set by sustainable development.
- 10 Salli has dozens of wheel alternatives. As the wheels are extremely important in saddle chairs, we install the best wheels based on the customer's needs.
- 11 Salli has different kinds of grids depending on different purposes. Our standard grid is practical in its size.
- 12 Salli manufactures offer whole workstations in which Salli tables, chairs and professional instructions for use guarantee the customer satisfaction.
